Multi-version/Bedrock support

> This was only **somewhat** tested but it should be fine

Multi-version support (ViaVersion):

By default Spectrum Survival supports only one version of Minecraft just like Vanilla servers. You can change it by using <u>ViaVersion</u> (either as a standalone proxy (ViaProxy) or on Velocity).

Bedrock support (GeyserMC):

Spectrum Survival is a **Java Edition only** server. But by using <u>GeyserMC</u> (either standalone, Geyser-ViaProxy, or on Velocity) you can change that.
